# Student User Stories

# Teacher User Stories

As a teacher I would like to create new accounts for students so that when a student does not have an account yet, I can create an account for them so they can see the required material.

As a teacher I would like to list all classes so that I can delete, modify, add, and more generally manage all my classes.

As a teacher, I want to add students to classes so they can view required content.

As a teacher I would like to remove students so that if I incorrectly add a student to the wrong class, I can remove them.

As a teacher I would like to set a date by which all students in a class must view a set of flashcards in any form (quiz ...) so that students can review material before a test(?)

As a teacher, I would like to add sets of flashcards to a class, so that students can view the required content.

As a teacher, I would like to list the students to view the students' progress in a class.

# Independent Learner User Stories

- As an independent learner, I would like to create a new topic by entering a series of words and definitions and saving it as the name of the topic
- As an independent learner, I would like to search for publicly available sets on a given topic
- As an independent learner, I would like to use flashcards to improve memorization
- As an independent learner, I would like to practice matching definitions to words
- As an independent learner, I would like to be able to track my progress on a given topic
- As an independent learner, I would like to be given feedback on the material that needs the most improvement

# IT User Stories

User feedback sources

A help section

Access to server logs

Notify users of  
shutdown and changes  
to the website

Temporary server  
shutdowns

# Critical Requirements

Easy Maintenance - Matthew

Flashcard File System - Mendel

Memory exercises - Danica

Share sets – Danny :)

User authentication - Rusho

# Flashcard File System

<b>ID:</b>	FlashCardFS
<b>Title:</b>	A system for managing sets of flashcards
<b>Description:</b>	This will allow user and especially teacher to group possibly common flashcards into folders.
<b>Primary Actor:</b>	General Users
<b>Preconditions:</b>	Successful login
<b>Postconditions:</b>	File System for flashcards is modified.
<b>Main Success Scenario:</b>	<ol style="list-style-type: none"><li>1. User creates new folder, or selects an already created one.</li><li>2. They create a new flashcard set for the folder.</li><li>3. Or they select one of their other flashcard sets to be added.</li><li>4. The flashcard set is added to the folder.</li></ol>
<b>Extensions:</b>	<ol style="list-style-type: none"><li>1. This can be extended to create a class or folder of flashcards shared by teacher to students.</li><li>2. User provides invalid input (bad folder name, or no flashcard set selected to add to folder) - Instruct user to provide proper name or select a proper set of flashcards.</li></ol>
<b>Frequency of Use:</b>	Depends on the user: Teachers will use it very frequently, but other users will use it much more infrequently.
<b>Status:</b>	Developing plan for code structure
<b>Owner:</b>	Mendel Rubin
<b>Priority:</b>	High

## Memory Exercises

<b>ID:</b>	MemTesting
<b>Title:</b>	Engage in memory testing exercises
<b>Description:</b>	This describes the process of handling the user interactions as they participate in various memory exercises.
<b>Primary Actor:</b>	Independent Learner
<b>Preconditions:</b>	<ul style="list-style-type: none"> <li>- Successful login</li> <li>- Topic created / Information entered</li> </ul>
<b>Postconditions:</b>	<ul style="list-style-type: none"> <li>- The user's progress is updated</li> <li>- Improvement suggestions are created / updated</li> </ul>
<b>Main Success Scenario:</b>	<ol style="list-style-type: none"> <li>1. User chooses which method they want to use to test their memory</li> <li>2. System generates a new version of the chosen exercise</li> <li>3. System keeps track of correctness as user completes the activity</li> <li>4. User is given feedback based on their performance</li> <li>5. System stores the user's progress for the given topic</li> </ol>
<b>Extensions:</b>	<ol style="list-style-type: none"> <li>1) System doesn't recognize input <ul style="list-style-type: none"> <li>- Instruct user to change their input</li> </ul> </li> <li>2) User attempts to generate exercise using an empty set <ul style="list-style-type: none"> <li>- Warn user that their current topic is an empty set</li> </ul> </li> </ol>
<b>Frequency of Use:</b>	Very often, almost every time website is used
<b>Status:</b>	Developing plan for code structure
<b>Owner:</b>	Danica Porter
<b>Priority:</b>	High

## Shared Sets

<b>ID:</b>	SharedSets
<b>Title:</b>	Sharing and Sending Sets between Users
<b>Description:</b>	This will allow the different users to share the sets that they have created between one another.
<b>Primary Actor:</b>	General users
<b>Preconditions:</b>	<ul style="list-style-type: none"><li>- Successful login</li><li>- Pre-created CardDeck(s) on one user's profile.</li></ul>
<b>Postconditions:</b>	<ul style="list-style-type: none"><li>- Dual access to CardDeck(s).</li><li>- Owner controls visibility and editing settings.</li></ul>
<b>Main Success Scenario:</b>	<ol style="list-style-type: none"><li>1. User opens a CardDeck or a folder of CardDecks.</li><li>2. They select that they want to share the Decks.</li><li>3. They choose how they want to share the deck (shared memory, txt file, or link).</li><li>4. The preferred deck format is sent to the other user.</li></ol>
<b>Extensions:</b>	<ol style="list-style-type: none"><li>1) Allow original Owner to control visibility and editors.</li><li>2) Allow non-owners to create a copy of the Deck.</li></ol>
<b>Frequency of Use:</b>	Moderately frequent, approximately once every few user sessions.
<b>Status:</b>	Developing plan for code structure
<b>Owner:</b>	Danny Peck
<b>Priority:</b>	High

## Easy Back-end work

<b>ID:</b>	Easy Back-end up work
<b>Title:</b>	A system for shutting down and working on backend
<b>Description:</b>	This will allow user to have easy access to the backend without interfering with users
<b>Primary Actor:</b>	IT Users
<b>Preconditions:</b>	Successful server shutdown
<b>Postconditions:</b>	Backend code is modified
<b>Main Success Scenario:</b>	<ol style="list-style-type: none"><li>1. User successfully shuts down server</li><li>2. User modifies backend code</li><li>3. Server is restarted at appointed time told to users</li></ol>
<b>Extensions:</b>	Be able to inform users about the time that the server will be shutdown and restarted
<b>Frequency of Use:</b>	Hopefully infrequently, but could have more use on initial launch
<b>Status:</b>	Developing plan for code structure
<b>Owner:</b>	Matthew Niemczyk
<b>Priority:</b>	High

## User Authentication

### User Authentication Use Case:

<b>ID:</b>	<b>userAuthenticationUseCase</b>
<b>Title:</b>	User Authentication
<b>Description:</b>	The user authentication use case will have stuff that the user authentication user persona and their user story will want to have.
<b>Primary Actor:</b>	The user.
<b>Preconditions:</b>	Standby and waiting for the user to input their login information.
<b>Postconditions:</b>	Waiting until the user finishes using the system?
<b>Main Success Scenario:</b>	If the login information for the user was correct, log them in, and if incorrect, show an error.
<b>Extensions:</b>	The teacher may also want to be able to login or sign up to use the system and so, they might need to be authenticated as a user.
<b>Frequency of Use:</b>	As often as the user wants to login and use the system.
<b>Status:</b>	In Development.
<b>Owner:</b>	Rusho Binnabi
<b>Priority:</b>	Critical.

# Non-Functional Requirements

## Efficiency:

- High space efficiency to account for limited DB size.
- Medium time efficiency because operations are free on MongoDB.
- For the prototype, want to handle 250 users at a time.

## Portability:

- Delivered as a web service. Want compatibility for Chrome, Firefox, and Safari.
- Support for mobile users will come later.

## Privacy/security:

- Minimize user data storage
- Properly salt and hash passwords.
